

Carbon Management Services (CMS)

Today, companies are facing numerous social and environmental challenges. One of the most important topics among them is climate change. With services such as Carbon Footprinting (i.e. CO₂ calculations), LCA or reporting, as well as support in communications and competence development, Carbon Management Services turns the climate change challenge into your opportunity!

The three factors of success

Carbon Footprinting

At which point in the product life cycle do most of the greenhouse gas emissions accumulate, and where are reduction measures meaningful? myclimate provides answers to these questions by analysing greenhouse gas emissions of products or processes.

GHG Data Management

The quality of decision-making processes depends on a large extent on the correct acquisition and interpretation of relevant data. The performance management system from myclimate supports corporate sustainability activities with functions such as benchmarking and reporting.

Communication

Many organisations are already doing their best to minimise greenhouse gas emissions. myclimate reviews operational initiatives, creates fact-based performance statements, offsets unavoidable emissions and offers the «climate neutral» label as an innovative approach to communicate this commitment.

Performance Management System

myclimate supports companies in the collection and interpretation of relevant data for decision-making processes, as well as for the optimization of products or operations. The performance management system supports you with the data analysis and interpretation for planning and implementation, as well as for evaluation and reporting. The software has been used in the industry for over ten years.

Custom-made emission calculators

The custom-made emission calculators give you the option to calculate the impact on the climate of activities or products at any time. The range of applications includes simple Excel tools or calculators in the myclimate online data management system, through to online services and online shops. The latter can be tailored to your individual requirements in every detail.

Advantages of the myclimate emission calculators

- **It's a tool that is facile to use and with which you can easily calculate the impact of products, services or business on the climate.**
- **The climate calculator offers a entertaining and instructive way for awareness-rising among employees or clients.**

Label for climate neutrality

In order to distinguish responsible businesses, myclimate has developed the «climate neutral» label. Organisations that display this label are making an especially significant contribution to climate protection. Not only are they striving to reduce their emissions, they also buy reductions through myclimate carbon offset projects for those emissions they can't avoid.

Carbon competences of CMS

- **All employees are environmental scientists or engineers with additional qualifications in the areas of business administration, management, marketing and communications.**
- **The clients appreciate the pragmatic approaches of myclimate based on solid scientific facts.**
- **Key accounts of myclimate include renowned companies and industry associations, e.g. Migros, Dyson, SAP BusinessObjects, SBB Cargo.**
- **Being an ETH spin-off, myclimate has access to a wide network of experts and partners in areas such as energy efficiency, process engineering or sustainability and resource management.**
