Your Tool for Effective CO_2 and Resource Management

# Carbon Footprinting with myclimate

myclimate smart 3 is a webbased platform for standardised carbon footprinting as well as for the management of comprehensive sustainability data. The tailor-made software is suitable for SMEs and for big international companies.

More than 350 companies are already using myclimate smart 3

Areas of Application

– Carbon footprint
– CO_2 and resource management through to the supply chain
– Sustainability and CSR data management
– Tailored reporting of environmental data

Functions and Strengths

For the successful implementation of your climate and sustainability strategy, you need smart CO_2 and resource management. myclimate myclimate smart 3 supports you in the core steps of data collection, consolidation, evaluation and reporting.

Your Advantages

– **Simple**
  User-friendly, intuitive, multilingual system

– **Efficient**
  Rapid set-up, time saving in data collection, analysis and reporting

– **Flexible**
  Individually configurable system that can be adapted to new requirements at any time

– **Dynamic**
  Data consolidation and dynamic evaluation with the option to select analysis levels, e.g. divisions, countries, locations, etc.

– **Modular**
  Reporting according to international CO_2 standards possible: GHG Protocol, ISO, CDP, GRI, can also be expanded with further environmental indicators

– **Secure**
  Guaranteed data protection, central data storage with backup

– **Good value**
  Attractive initial and maintenance costs

CO$_2$ and Resource Management

Data Collection	Consolidation	Evaluation	Reporting

Standardised Carbon Footprinting

Data Collection	Consolidation	Evaluation	Reporting
User-friendly input screen	Company structures can be configured flexibly	Automatic evaluation of the impact on the climate of activities	Efficient reporting in line with GHG Protocol standard
Data upload via Excel	Depiction of company changes over time	Traceability of calculation logic	Individual compilations of time series
Comments function and file upload for the documentation of data	Multiple possibilities for consolidation	Comprehensive database with current emissions factors	Variable visualisation possibilities
Upload of historic data		Compilation of data and results with Excel export	

Tailored Solutions

Data Collection	Consolidation	Evaluation	Reporting
Further data classification: estimated, calculated, measured	Adjustable system boundaries and granulation	Customer-specific evaluations and key figures (KPIs) from a company and product perspective	Can be expanded with customised reporting according to ISO 14 001, GRI, CDP
Data input with default values and formulas	Flexible configuration of reporting cycles and input frequency	Customised models and emissions factors	Automated reporting with intelligent text blocks
Interface connection to other IT systems (API)	Integration of extrapolation models	Can be expanded with environmental indicators as required	

"smart 3 is an easy-to-use platform that provides high-quality coverage of very different needs. The transparency and traceability of the calculations were impressive. In general, myclimate smart 3 makes data collection and processing easier, quicker and less vulnerable to errors. We were able to amortise our investment in this platform after using it for only a little more than one year."

Pascal Salina
Corporate Responsibility Manager, Swisscom
