

CEN - Climate Educator Network

In the community of practice educators can find know-how, exchange experiences and collaborate with fellow educators for a better future.

The Climate Educator Network CEN supports and facilitates capacity building and exchange between educators like teachers, group leaders or trainers around the world.

CEN offers educators activity descriptions as basis for their own educational activities in the field of climate protection and sustainable development.

Educators interested in online collaboration can build a tandem - to organize an online exchange between their groups or to support each other planning an activity.

Climate change continues to be one of the greatest challenges of the 21st century. I have been involved with several schools to encourage them to plant trees in their nurseries. Through CEN I get in touch with other educators and share my experiences here in Kenya.

Merculine, educator from Kenya

We need to confront students with the challenges of today's world such as migration, climate change or economic crises and develop solutions. The solar panels, which are set up on the roof of one of our

school buildings, produce half of the schools energy demand.

Christian, educator from Switzerland

When we collaborate, we bring meaningful change. As a teacher, I have worked closely with young students to promote energy conservation at schools in Dharamsala.

Tenzin, educator from Tibet/India

Become CEN Partner

Support an educator planning and implementing an educational activity for climate protection and sustainable development with his group.
