

The credible, effective path to Net Zero

Climate protection within the company

- Calculation and control of emissions
- SBTi target-setting
- Development of a reduction strategy:
 - Reduction plan (SBTi-aligned)
 - Operational measures
 - Climate protection projects along the supply chain
- Educational programmes for skills development and empowerment

- Contributions to climate protection projects in line with the SBTi and Ongoing Emissions Responsibility (OER)

Develop a credible net-zero strategy with myclimate

Carbon avoidance and reduction

Projects beyond the value chain, technological or nature-based (e.g. renewable energies, forest protection, restored moors, stoves)

Nature-based carbon removal

Removal with limited permanence through forest and agricultural projects (e.g. agroforestry systems, afforestation, biogenic building materials)

Durable carbon removal

Permanent removal through technical solutions (e.g. biochar)

Strategic, comprehensive and fit for the future

Consulting

We help companies understand their impact (footprint) on the environment and climate, reduce this footprint, and take immediate and future responsibility for residual emissions. We provide professional advice and support with tailored, industry-specific analysis and solutions to help you on the path to your net-zero target.

Climate protection projects

Local or international, nature-based or technological, from our existing portfolio or made to measure: we provide you with projects to suit your needs and your level of ambition in line with Ongoing Emissions Responsibility (OER, in accordance with the SBTi).

Education

Our educational programmes focus on impact and solutions to empower, inspire and support people in their careers. Through expanded skills and targeted training programmes, we promote environmentally-conscious thinking and action that shapes your corporate culture over the long term.
