

Solar Energy for Education and Jobs

Installation of a solar panel: Your offset payment could contribute, for example, to this climate protection programme in Tanzania. Solar home systems including a GSM modem deliver a clean, affordable alternative to fossil fuels for low-income households and small businesses. The technology reduces carbon emissions effectively.

Yes, I would like to protect our climate!

Simply fill in the reply card and send it back to myclimate. Afterwards, you will receive your emissions calculation from us as well as a deposit slip for your contribution to climate protection. Thank you very much!

Offset your travel emissions

We all try to cause as little CO₂ as possible. Nevertheless, greenhouse gas emissions that harm the climate arise as a result of most everyday activities, as well as from travel. Emissions are produced, for example, when driving a car or taking a flight.

Therefore, it is important to take responsibility for our emissions and help to save them elsewhere. Offsetting works because the most important thing for the climate is to reduce the amount of emissions worldwide.

Offset your travel emissions in a high-quality climate protection project from myclimate.

It's this easy:

www.myclimate.org

You calculate the climate-impacting emissions on our website. You pay with either your credit card, TWINT or by invoice.

by regular mail / info@myclimate.org / telephone

Fill in the reply card, send us an e-mail or give us a call: +41 44 500 43 50

Clean Drinking Water in Uganda

Happy with their clean drinking water: More than 200,000 pupils are being reached by this myclimate drinking water project in Uganda. Thanks to new UV purification units, schools can provide enough drinking water. The children suffer fewer illnesses and can attend school regularly. The schools save firewood that they previously needed to boil the water, thus saving costs, reducing deforestation and avoiding CO₂ emissions.

myclimate Climate Protection Projects...

- meet the world's highest and most rigorous quality standards (Gold Standard, Plan Vivo).
- are developed and implemented with strong, local partners.
- are completely sustainable. The local population benefits from social, economic and environmental improvements: job creation, knowledge and technology transfer, improved quality of life.
