

myclimate Audio Adventures

myclimate Audio Adventures are acoustic discovery trips for three age levels in numerous Swiss cities and regions. On ever-changing regional and climate protection walks, climate-relevant topics such as consumption, energy, politics and economics are shown, which in turn enables climate protection and sustainability to be experienced.

As an attractive leisure time offer for young and old, these somewhat different discovery trips show the measures that are taken for local climate protection and where innovations for more sustainability can be discovered. The offer generally includes three different audio stories, which include stories for children above the age of 5, a version for young persons and one for adults. This diversity makes myclimate Audio Adventures an ideal excursion, loaded with learning material for the whole family as well as schools.

How does an Audio Adventure work?

The Audio Adventures are currently only available digitally via the izi.Travel platform or the Izi.Travel app. All existing stories are listed below and directly linked to the audio files on izi.Travel.
